

RDC634XG- 4-way Laser Expansion Board Wire Instruction

RDC634XG laser engraving/cutting controller can total control two-way independent laser source, the maximum and minimum power can be adjusted separately without interference. In order to achieve 4-way laser power source, there is need of expansion board. The wiring diagram of RDC634XG controller and expansion board combined control 4-way laser power source as followed:

The wiring as the picture showed, LASER_OUT1 interface & LASER_OUT2 interface controlled by one control source, LASER_OUT3 & LASER_OUT4 controlled by another control source.
